**MD SCIENTIFIC CHOOSES ADVOCOS TO HELP PROMOTE ENDOTOOL™**  
*Multi-Year Agreement Signed*

CHARLOTTE, N.C – MD Scientific, LLC (MD Scientific), creators of EndoTool™, a software application to help healthcare providers calculate insulin dosage to control blood sugar for patients in critical care, announces a partnership with Advocos LLC, a contract sales organization that provides sales and marketing services to companies in the biotech and pharmaceutical industries.

EndoTool™ Glucose Management System received FDA clearance on June 20<sup>th</sup> 2006. The tool effectively and safely controls blood glucose for critically ill patients. Based upon over thirty two proprietary algorithms, EndoTool™ provides patients with unique and individualized insulin dose calculations that rapidly control and maintain the patient's blood sugar. Advocos will work with MD Scientific to increase awareness of the EndoTool™ and to expand the use of the system throughout hospitals in their geographic area.

“Advocos understands the importance of a safe Tight Glycemic Control program in our hospitals,” said Shade Mecum, President of MD Scientific. “We are glad to continue our growth and to be working with Advocos in an effort to reduce infection rates in our hospital’s intensive care units through the use of the sophisticated EndoTool™ Glucose Management System.”

Robert Godfrey, President of Advocos LLC, said, "Our background in the hospital sector will give us the ability to quickly launch the EndoTool™, and to be able to impact the market significantly. We are looking forward to working with MD Scientific to increase the use of the dynamic EndoTool™ within hospitals.”

MD Scientific signed a multi-year agreement with Advocos. The contract will provide MD Scientific with multiple sales teams that will be launched in August and October 2006. The potential to expand these sales teams over time will increase MD Scientific’s EndoTool™ distribution and support.

**About MD SCIENTIFIC**

Founded in September 2003, MD Scientific has developed a software application to calculate insulin dosage for critically ill patients with elevated blood glucose and to control blood glucose levels.
