NEW APPLICATIONS REPRESENTATIVE ABOARD
Donna Wittwer Will Promote MD Scientific's Software to Potential Users

CHARLOTTE, N.C. – Current and potential customers of MD Scientific's medical software products are sure to be impressed with Donna Wittwer's dedication to customer satisfaction and ability to foster great client relationships. As an Applications Representative – Medical Software, Donna is responsible for identifying potential users of the company's services and products, such as EndoTool™. She introduces the MD Scientific services to the users, pre-engineers the application and presents the commercial and technical proposal. Additionally, she ensures that all procedures comply with the safety requirements of clients.

Prior to joining MD Scientific, Donna was a Territory Manager at Sanuwave, a global medical technology company focused on the development and utilization of Extracorporeal Shock Wave Technology (ESWT) for orthopedic, chronic wound care, cardiovascular and neurological conditions. There she developed and achieved sales revenue and market share in Northern and Central Florida, New York and New England territories in the orthopedic industry. She recruited, trained and supervised surgeons and the medical team in the operating room. Prior to Sanuwave, Donna spent time as a Critical Care Nurse at Orlando Regional Medical Center, which is part of Orlando Regional Healthcare System.

“We are continually impressed with Donna's exceptional account management skills,” said Shade Mecum, President and CEO of MD Scientific. “Her highly aggressive sales technique coupled with her years of experience in the critical care field as a Registered Nurse enables her to really understand and relate to our customers.”

In addition to working within hospitals and clinics to promote MD Scientific's medical software, Donna participates in national trade meetings, writes technical articles for publication and constantly pursues educational opportunities to keep current with customer processes.

About MD Scientific

Founded in September 2003, MD Scientific currently markets EndoTool™, a highly sophisticated software system that calculates the dose of IV insulin needed to quickly control blood glucose levels in a critical care setting. This proprietary, easy to use, FDA-cleared software actively models and adapts to individual patient responses to IV insulin – even those with fluctuating insulin requirements. For more information about the company, EndoTool™ and other offerings, please visit www.mdscientific.com.
